

FIX Pro II

Out-of-the-box, **FIXProII** is a powerful Windows® (16 or 32 bit) inventory solution you can implement quickly. If you have more unique requirements, **FIXProII** really shines!

automate processes currently done manually, and layout of Pick/Pack Lists.

Using either your own internal project staff or one of Ironwood's FIX Integrators, **FIXProII** can be customized and configured to accommodate your company's specific business requirements.

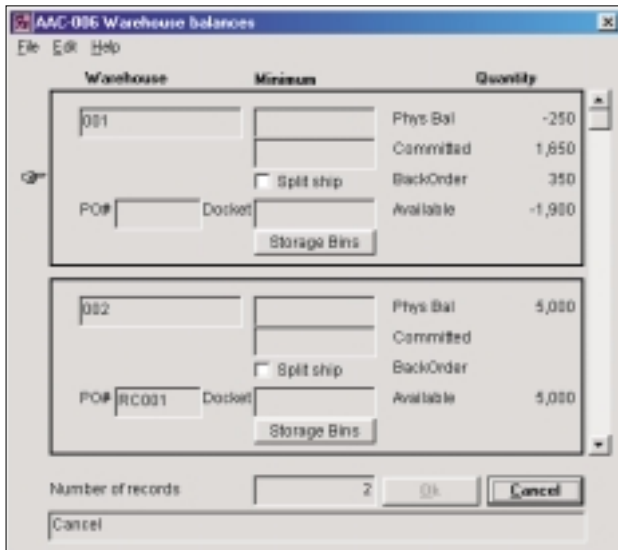

“FIX software has been the ideal solution for my company's and my customer's warehouse or inventory management needs”

—Bill Diebler, Executive VP, Digital-Link

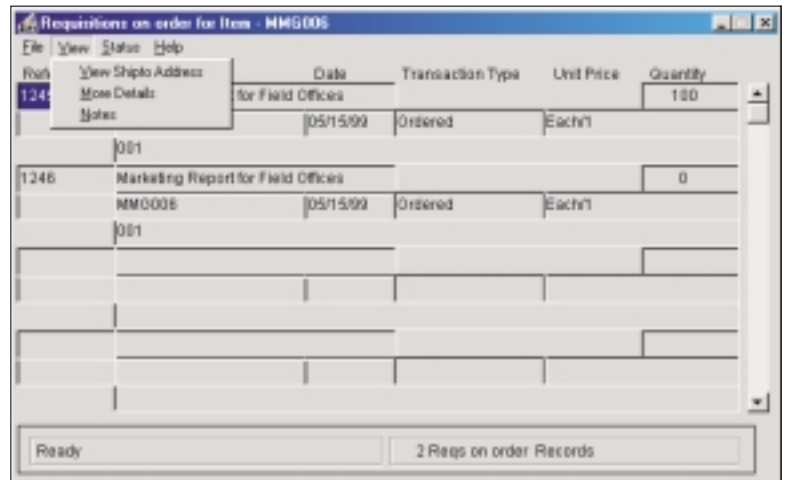

In-house, you can develop your own reports on virtually any combination of data within FIX. You can use FIX's powerful native SQL environment or access your data using a leading reporting package such as Crystal Reports®.

Typical customizations are: integration with a Docutech® printer for POD workflow, monthly tax and chargeback reporting, custom reports to

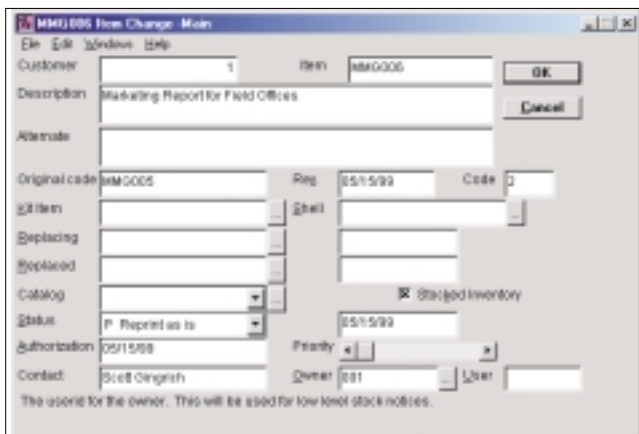

Check out the many features of **FIXProII**, a powerful, flexible, customizable inventory software package that will grow as you grow.

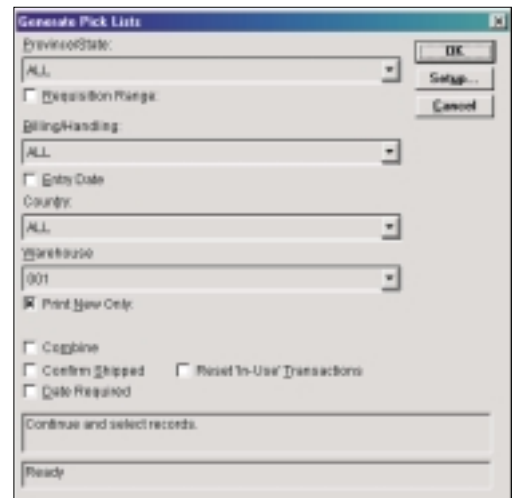

← See inventory numbers at the warehouse level.

Easily inquire on any transactions, current or past →

Powerful and flexible Pick List printing options that fit your business processes →

← Track all necessary forms management info for each item.

Requisitioning

- Restrict orders for an item by State or Province.
- Maximum issues at the item or Location/Branch level.
- Powerful search capabilities during order entry; search by partial item code, description, etc.
- Find requisitions by Requisition Number, Pick List number, dates, Location or Warehouse. Save your searches for future use!
- Subscriptions. Create a master order and *subscribe* the Locations you decide to the order.
- Add free-text notes to any line item ordered. Create a library of frequently used free text notes for easy retrieval.
- Flexible (and customizable) expense account generation for each line item ordered.
- Enter orders for kits, definable by State or Province and the details will explode on the Pick List.

Inventory Control

- Track inventory across multiple warehouses. Have multiple fulfillment and multiple vendor warehouses.
- Track inventory at the bin level for those warehouses you designate as having multiple bins.
- Apply status codes to an item to control how that item is ordered, e.g. Suspended items are blocked from being ordered..
- Complete tracking of all transaction histories for an item. Easily view and report on history with robust inquiry programs.
- Full Back Order handling; create true Back Orders for release and fulfillment.

- Allow split shipping, a line item will appear on the Pick List for multiple fulfillment warehouses until that order is fulfilled.
- Powerful Low Level Reporting.
- Re-order notice approval tracking.
- Automatically substitute new items for obsoleted ones.
- Barcode option.
- 20 character Item Code.
- 200 character Item Description.
- Interface with your Shipping System.

Standard Reports

- There are several reports included with the FIX System: Low Level Reports, Usage Analysis, Reorder Approval Notices, etc.

Print-on-Demand

- Easily interface FIX with a Docutech® or in-line printers. Orders will automatically route to a Docutech®; no need to know what is and isn't POD during Order Entry.

Out-of-the-Box Flexibility

- Easily customize the menu and security system to suit your environment: what programs are seen and available to whom.
- Option to turn on FIFO price layers.
- Option to turn on tracking at the bin level by warehouse.
- And much more!
